National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in National Register Bulletin, *How to Complete the National Register of Historic Places Registration Form*. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. **Place additional certification comments, entries, and narrative items on continuation sheets if needed (NPS Form 10-900a).**

1. Name of Property

Narrative Description

Summary Paragraph

The property at 502 West State Street in Geneva, Illinois is a 20th century Pure Oil service station whose stylized Tudor Revival design formed the corporation's architectural logo. The building consists of an irregular "L" shaped plan of one story with steeply pitched front and side gabled roof and construction details which are based in Tudor traditional and serve as emblems of the Pure Oil company. The Tudor Revival aesthetic allowed the building to fit more coherently into its suburban residential setting. The building is situated in the southwest corner of a rectangular lot at the corner of State Street and Fifth Street. Asphalt paving covers the rest of the lot at the north and east. The property is in excellent condition and retains much of its original construction material and decorative elements.

Narrative Description

Context

The Pure Oil Station is located along State Street (a section of Lincoln Highway), two blocks from the historic heart of the commercial downtown of Geneva, Illinois. The street continues to be a major commercial thoroughfare as it is lined by historic and newer commercial buildings. State Street is considered the north boundary of Central Geneva Historic District (and the south boundary of the North Geneva Historic District to the north). The Central Geneva Historic District is generally characterized by architectural homogeneity across residential and commercial buildings. The station itself is considered "noncontributing" to the historic district which was designated in 1979.

The Pure Oil Station

The main façade of the Pure Oil Station faces State Street to the north and the secondary façade faces Fifth Street to the east. The building is set on a concrete foundation. Common brick walls were laid using decorative skintled brickwork, characterized by bricks projecting irregularly and at varying degrees from the face of the wall. The brick is finished in white paint. The front gable at the west end of the building is clad in wood shingles at its peak.

The majority of the building is covered by a gabled roof which is steeply pitched and covered in glazed blue terra cotta tile. Covering the south half of the service bays is a flat composite roof, hidden from view by the pitched roof to the east and north. Three skintled brick chimneys flank the gable ends of the eastmost volume. Two of these are adorned with a large metal letter "P," the Pure Oil emblem. These symbols are also painted white and positioned at the top of each stack.

The building can be divided into three main volumes: the east volume for serving pedestrians, the west volume for serving vehicles, and the addition to the south. The west volume has three large overhead doors on its north elevation. The westmost vehicular entry is accented by a cross-gable and slightly projecting façade. The corresponding door and frame are smaller than the two others on this facade. The north elevation of the east volume contains the main pedestrian entry with large storefront window. Three original light fixtures remain on this façade.

The east façade of the building may be divided into two sections. The north section contains two divided-lite steel casement windows with wood shutters separated by a chimney. The south section contains one wood paneled entry door with two divided-lite steel casement windows directly adjacent. One original light fixture remains at this façade and is of a different design than those found on the north façade. The east façade of the addition to the south contains an overhead garage door with windows. This door has been fixed and place and a pedestrian door installed at one half.

The south elevation is composed of the 1950s brick addition to the west and a small section of the original building at the east end. This face of the addition is a brick wall and is otherwise featureless. At the original building to the east, a wood panel entry door with transom window and one steel awning window are present.

The main west elevation is not visible as it is only a few feet from the building to the west. Only one opening exists at this façade, a large glass block window. The west elevation of the east "pedestrian" volume contains one divided-lite steel casement window with wood shutters.

At the interior, the 3 volumes serve several functions. The east volume, for pedestrian interactions, included a sales room/office, supply room, mechanical room, and restroom. The west volume contained 3 vehicular service bays. A door allows passage between these two volumes and a large window in the supply room also allows immediate visual

Pure Oil Station

Name of Property

Kane County, Illinois

County and State

connection between the two. The third volume is the addition to the south. Currently, it is connected to the rest of the building through two large passageways and two steel divided light windows in the wall between the addition and the service bays.

Finishes are utilitarian throughout all volumes. Walls are primarily of painted brick, bringing the aesthetic of the exterior to the interior. The remaining partition walls are wood frame construction and also painted. Ceilings are finished in plaster with wood trim. Interior wood panel doors and frames remain in place. Floors at the east volume are vinyl tile while at the west and south volumes they are concrete. Decorative track lighting exists in the main rooms of all three volumes. Additional lighting is utilitarian including fixtures for incandescent and florescent lamps.

Integrity

The Pure Oil station is the best remaining example of a Tudor Revival gas station in downtown Geneva. Much of the original fabric of the Pure Oil Station has remains in fair condition. The only major changes to the exterior of the building are the 1950s brick addition to the south, reconfiguration of the north entrance to the sales room/office (date of alteration unknown), and installation of new garage doors at vehicular service bays. In the 1950s a simple rectangular addition was constructed at the south elevation of the building. The south wall of the service bay volume was punctuated in two places to accommodate passage between the two and a window overlooking the west-most bay. The main storefront entrance was originally configured with canopied center entry flanked by a small arched-top window on one side and a bay picture window on the other. The date of installation of the garage doors is also unknown. The character of the doors is in keeping with the originals, but utilizes a different number of rectangular "bays" across the face of each.

Despite the previously described changes to the original design, the station retains all of its original footprint, construction materials, and decorative details which make it significant as an example of the use of Tudor Revival in a commercial context. The roof, decorative brickwork, majority of windows, and light fixtures are original to the building. Other original decorative elements remain, including window shutters, ornamented downspouts, and the metal Pure Oil "P" adorning the chimney stacks. In context of downtown Geneva, the building and site retain their original character, occupying an asphalt corner corner lot along Main Street near the historic commercial center of the city.

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield, information important in prehistory or history.

Statement of Significance Summary Paragraph (Provide a summary paragraph that includes level of significance and applicable criteria.)

Pure Oil Station

Name of Property

Kane County, Illinois

County and State

The Pure Oil Station in Geneva is listed as significant in the 1999 local architectural survey and has been preliminarily approved for inclusion in the National Register of Historic Places under Criteria C for architecture. Possessing a high level of integrity, it is an excellent example of the Tudor Revival style, especially as it was applied to commercial architecture in the early half of the 20th century. Furthermore, this Pure Oil Company Station and others of this period are significant not only as excellent examples of Tudor Revival but also as early illustrations of architecture used as commercial marketing technique.

Narrative Statement of Significance (Provide at least **one** paragraph for each area of significance.)

Context

The city of Geneva is one of several communities which developed along the Fox River immediately after the end of the Black Hawk War in 1832. Due to influential residents, the original settlement named "La Fox" was established as the seat of Kane County in 1836. The first official platting of the city was in 1837 and followed a traditional grid pattern. Civic and commercial activities were initially concentrated immediately east of the river along State Street (which also served State Route 38). Due to construction of a railroad station at Seventh Street, during the later half of the 19th century, the city's commercial center gradually shifted west to the intersection of Third Street and State Street.

Much of Geneva's early architecture remains and retains a fair level of integrity. Over 80% of the building stock within the Geneva historic districts was constructed before 1950. Following typical architectural fashion of the time, a large number of these buildings utilized historicizing architectural styles, such as Tudor Revival, while others were based in more modern movements, such as the Prairie Style.

The Pure Oil Station in Geneva Illinois was constructed in 1937 at State and Fifth Street, only two blocks from the historic city center. During the early to mid 20th century, this main street became residence to several gas and oil service stations. A 1945 Sanborn map shows 6 service stations present along 4 blocks of State Street. Two were located on the northeast and southwest corners of West State and First Street. Two were located on the southeast and the southeast and southwest corners of West State Street and Fourth Street, and two were located on the southwest and northeast corners of State Street and Fifth Street. Of these, only two remain: the Pure Oil Station at 502 West State and an unnamed station with large addition and questionable integrity located at 427 West State Street. Both buildings were designed using Tudor Revival aesthetics.

Tudor Revival Style

As part of a larger trend towards revitalization of historic architectural styles near the turn of the 20th century, Tudor Revival style is based on late medieval architecture of the 16th century Tudor England. Revitalization of the style became most prevalent in the 1920s and 1930s and was generally considered second in popularity to only the Colonial Revival style. Tudor Revival was thought to have conservative and romantic connotations and allowed for a comfortable home on a relatively small scale. Possessing intrinsic historic and domestic overtones while referencing the rural aesthetic, the style was selectively applied to commercial buildings as an affective rebuttal to the typical "ugliness" of typical commercial architecture of the period.

Evidence of the popularity of the Tudor Revival style is found in Geneva as five houses of this style currently remain within the Geneva Historic District (three ranking as locally significant). Due to the domestic qualities of the style, it was sparingly applied to commercial buildings. The major exception to this rule was the gas and service stations, holding true in Geneva as the two commercial examples of the Tudor Revival style are the gas stations a 427 and 502 West State Street.

Massing of a Tudor Revival building was typically asymmetrical. Facades were constructed of brick or stone construction and some include stucco with half-timbers or wood cladding. Roofs were composed of one or more front-facing gables and are steeply pitched. Chimneys were a prominent feature and are constructed of brick or stone. Windows were tall, narrow casements, often paired, and of multiple divided lites. These were often accented by a soldier course at their header or by wood panel shutters. Front doors were often accented by an arched header. The Pure Oil Station in Geneva was designed using all of these features and retains the majority of these characteristic elements of Tudor Revival today.

Oil/Service Stations

Before the 1920s, filling stations were architecturally insignificant structures. Often they were little more than a shelter adjacent to gas pumps. They were marred by a reputation for being fire hazards and were typically eschewed to

Pure Oil Station

Name of Property

Kane County, Illinois

County and State

roadsides located outside of residential areas. Through the ingenuity of the Pure Oil Company in the mid 1920s, franchised stations were produced which negated this reputation while increasing efficiency and marketing power. A few highly efficient architectural models were developed using the Tudor Revival ("English Cottage") aesthetic to appeal to their American middle to upper class audience.ⁱ With this architectural vocabulary, they produced a station which was more readily accepted in suburban neighborhoods and even residential areas. The standardization of their design also allowed easy recognition of their services and the growing reputation of the Pure Oil Company. This architectural model became a corporate trademark as the company stated in their announcement of their design in 1927:

"A service station pictures to the passing motorist the type of company it represents.... With this in mind, the Pure Oil Company has sought to develop and standardize a type of station, not merely as a place to get "gas," but one that would be attractive and inviting as well."ⁱⁱ

Carl August Petersen, Chief Engineer of Marketing Construction for Pure Oil during the 1920s, was responsible for the design of these stations and incorporation of the "English Cottage" style. He anticipated that this eclectic aesthetic would be associated with "quaint charm," "warmth," and an overall "'homey' appearance." Indeed, the design melded easily into the architecture of suburban and urban residential neighborhoods constructed between 1900 and 1940.

The Pure Oil Company was one of the first American corporations to use architecture in this way. Ever since the birth of this cultural paradigm, "architectural packaging" has become a common part of the American landscape.

Place-Product-Packaging

"Place-product-packaging" has been defined by cultural geographer John Jakle as "The networking of look-alike place defining trade territories, all supported through coordinated advertising." More simply, the repetition of architectural design was used in the same manner as that of a company trademark. For the Pure Oil Company, standardization of their station design hinged on repetition of a very specific architectural vocabulary as well as repetition of ideal floor plans. This resulted in easy recognition of the building as a Pure Oil station as well as efficiency in construction and use of space. Oil companies during the first half of the 20th century were of the earliest industries to utilize this cultural marketing tool. Soon after, it would be taken up by innumerable fast food restaurants, pharmacies, banks, and big-box stores.

The Pure Oil Station in Geneva, Illinois, was constructed during this period of history and is an important example of this cultural and architectural movement. The location of the building was typical for this period, utilizing an ideal corner site on a main thoroughfare adjacent to both commercial and residential areas. The layout, material palette, and architectural detailing of this station are also similar, even identical, to other Pure Oil stations constructed between 1927 and 1940.ⁱⁱⁱ Skinted brick construction, steeply pitched gable roofs, tall narrow casement windows of multiple panes, wood shutters, prominent exterior chimneys, and the irregular plan are all basic elements of Tudor Revival which were utilized in the typical Pure Oil station of the period. Furthermore, adaptation of the style to serve the intention of the Pure Oil Company is evident in the signature royal blue terra-cotta tile and use of the "P" emblems on chimneys and downspouts. The plan, detailing, and location of the building are all excellent illustrations of the idealized Pure Oil Station of the period.

Verbal Boundary Description (Describe the boundaries of the property.)

The boundary of the site is a rectangle that may be described as follows: Starting at the southwest corner of the right of way at State Street and Fifth Street, proceed southwest approximately 75' along the sidewalk to the alley. Turn and proceed approximately 80' northwest along the alley. Turn and proceed northeast approximately 75' along the intersection of the Pure Oil Station and the building directly adjacent to the northwest. Turn and proceed approximately 80' southeast along the sidewalk to the point of origin.

Boundary Justification (Explain why the boundaries were selected.)

Extents of legally recorded boundary of property.
